

Minisymposium: Degenerate Structures and Fractals

Maria Agostina Vivaldi, organizer

Aims and scope. It is our intention to concentrate on the recent analysis on fractals and on quasi-metric spaces, especially in connection with the corresponding theory of function spaces. Stochastical aspects should be included. In particular we address elliptic and parabolic boundary value problems in which fractal and euclidean interactions are relevant.

Tentative list of participants

- M. Biroli (Politecnico di Milano)
- R. Capitanelli (Università di Roma Sapienza)
- F. Cipriani (Politecnico di Milano)(to be confirmed)
- U. Freiberg (University of Jena)
- D. Guido (Università di Roma Tor Vergata) (to be confirmed)
- T. Isola (Università di Roma Tor Vergata) (to be confirmed)
- M. R. Lancia / P. Vernole (Università di Roma Sapienza)
- L. Moschini (Università di Roma Sapienza)
